

# From university to life science and rare disease consulting

Dr. Myriam Mirza, MBA  
Charles River Associates

In my seven years as a life sciences and healthcare consultant, I have led teams to implement clinical programmes for rare diseases, advised European and US clients on market entry, market access and expansion strategies, as well as clients in healthcare, medical devices, pharmaceuticals and non-profit organisations.

In this talk, I will outline what the day-to-day work of a life science consultant is like, how the work relates to my degree in biochemistry and what additional skills are required.
